

Práctica S3: Bootstrapping de la Cápsula de Desarrollo con Vagrant - Jorge Parra ITIT 13104

Vagrant file

```
1 Vagrant.configure("2") do |config|
2   config.vm.box = "ubuntu/focal64"
3
4   # Definición de la red privada
5   config.vm.network "private_network", ip: "192.168.56.10"
6
7   # Forja de recursos físicos
8   config.vm.provider "virtualbox" do |vb|
9     vb.memory = "2048"
10    vb.cpus = 2
11  end
12
13  # Script de Ignición Solar (Aprovisionamiento)
14  config.vm.provision "shell", inline: <<-SHELL
15    apt-get update
16    apt-get install -y curl
17  SHELL
18 end
```

Vagrant up

```
Administrator: Windows PowerShell
PS C:\Users\jorge\Desktop\Noveno_Semestre\Toledo - Instrumentacion virtual para moviles\Parcial_1\practica-s3> vagrant up --provider=virtualbox
Bringing machine 'default' up with 'virtualbox' provider...
==> default: Checking if box 'ubuntu/focal64' version '20240821.0.1' is up to date...
Vagrant is currently configured to create VirtualBox synced folders with
the 'SharedFoldersEnableSymlinksCreate' option enabled. If the Vagrant
guest is not trusted, you may want to disable this option. For more
information on this option, please refer to the VirtualBox manual:

https://www.virtualbox.org/manual/ch04.html#sharedfolders

This option can be disabled globally with an environment variable:

VAGRANT_DISABLE_VBOXSYMLINKCREATE=1

or on a per folder basis within the Vagrantfile:

config.vm.synced_folder '/host/path', '/guest/path', SharedFoldersEnableSymlinksCreate: false
==> default: Clearing any previously set network interfaces...
==> default: Preparing network interfaces based on configuration...
default: Adapter 1: nat
default: Adapter 2: hostonly
==> default: Forwarding ports...
default: 22 (guest) => 2222 (host) (adapter 1)
==> default: Running 'pre-boot' VM customizations...
==> default: Booting VM...
==> default: Waiting for machine to boot. This may take a few minutes...
default: SSH address: 127.0.0.1:2222
default: SSH username: vagrant
default: SSH auth method: private key
default: Vagrant insecure key detected. Vagrant will automatically replace
default: this with a newly generated keypair for better security.
default:
default: Inserting generated public key within guest...
default: Removing insecure key from the guest if it's present...
default: Key inserted! Disconnecting and reconnecting using new SSH key...
==> default: Machine booted and ready!
==> default: Checking for guest additions in VM...
default: The guest additions on this VM do not match the installed version of
default: VirtualBox! In most cases this is fine, but in rare cases it can
default: prevent things such as shared folders from working properly. If you see
default: shared folder errors, please make sure the guest additions within the
default: virtual machine match the version of VirtualBox you have installed on
default: your host and reload your VM.
default:
default: Guest Additions Version: 6.1.50
default: VirtualBox Version: 7.2
==> default: Configuring and enabling network interfaces...
==> default: Mounting shared folders...
default: C:/Users/jorge/Desktop/Noveno_Semestre/Toledo - Instrumentacion virtual para moviles/Parcial_1/practica-s3 => /vagrant
```
